About Me

I'm an experienced software engineer interested in every aspect of digital product development. In recent years I have focused more on the practices, processes, and systemic conditions that make efficient product development possible: on the technical side through engineering practices such as TDD, trunk-based development, and CI/CD, and on the product side through agile ways of working, Kanban, and flow. I did not just advocate this in theory but put it into practice together with the teams. Sometimes focused with a single team directly in the code, sometimes across more than ten teams followed by ongoing support. Solid grounding in methods and years of hands-on practice go hand in hand for me.

To stay current technically, and to be able to demonstrate these concepts and their impact first-hand, I started building Lighthouse, a flow-metrics and probabilistic forecasting tool (C#/.NET backend, React + TypeScript frontend). It has grown into a product used worldwide. A single codebase runs as a desktop app, a self-hosted server, and a hosted SaaS service. I ship weekly, working with TDD, CI/CD, and agentic software engineering.

Automation is what I enjoy most, whether it's a CI/CD pipeline like the one behind this CV or previously manual processes such as digital signing and licence scanning (Black Duck) at Hitachi Energy.

Skills

Technical Practices	Test-Driven Development (TDD), Trunk-Based Development, CI/CD, Test strategy (unit, integration, E2E), Pair/Mob Programming, AI-augmented coding (Claude Code, GitHub Copilot, agentic workflows with nWave)
Programming Languages	TypeScript, C# / .NET, Python, PowerShell
Frameworks	Node.js, React, ASP.NET, Entity Framework, Tauri, REST API design
DevOps and Infrastructure	Azure DevOps, Azure Pipelines, GitHub Actions, Git, Docker, SQLite, PostgreSQL, Kubernetes, ArgoCD, Grafana
Methodologies and Practices	Scrum, Kanban, Lean, DevOps, XP, Clean Code
Facilitation and Collaboration	Liberating Structures, Training from the Back of the Room, Mural, Miro
Languages	German (native), English (fluent), Spanish (basics)

Experience

aity AG

aity AG is a company in the finance industry, providing Swiss engineering for banking, SaaS, and embedded finance.
The company is organised around Unfix patterns, a non-traditional model for how teams collaborate.

aity AG *Bern, Switzerland*

Team Coach & Organisational Developer (Technical Agile Coaching) *May 2025 - Present*

- Pair and mob with engineers at the keyboard during technical coaching sessions, contributing code alongside the team.
- Lead cross-team rollout of engineering practices including TDD, CI/CD, trunk-based development, and AI-augmented coding. Work with teams to define branching strategies and shared engineering quality standards.
- Establish flow metrics and data-informed decision making across the engineering organisation, bringing forecasting and continuous improvement into team rhythms.
- Work with dozens of engineers across multiple teams, together with fellow coaches and leadership.
- Help introduce GitHub Copilot for the engineers as a proof of concept: setting it up, enabling teams to use it effectively, and staying within the regulatory and legal constraints of the finance industry.

LetPeopleWork GmbH

LetPeopleWork GmbH helps organizations unlock their full potential. Through consulting, training, and the development of Lighthouse, a tool for flow metrics and data-driven forecasting.
We share knowledge in our areas of expertise, gain experience running a business, and stay up to date with technology by driving Lighthouse development.

LetPeopleWork GmbH

Zurich, Switzerland

Co-Founder, Managing Director and Lead Developer Lighthouse — *May 2025 - Present*

- Sole designer, developer, and operator of Lighthouse (C#/.NET backend, React + TypeScript frontend), built and maintained in roughly 20% of my working time. Used by teams worldwide.
- Architected as a ports-and-adapters modular monolith (ASP.NET Core, EF Core, React SPA, SignalR, REST API and MCP server for AI agents, connectors to Jira, Azure DevOps, Linear, and ServiceNow). One codebase runs as a zero-dependency standalone desktop app, as a self-hosted Docker server with PostgreSQL, and as SaaS on our own Kubernetes cluster (Helm, ArgoCD). Deliberately pragmatic for its audience: from people who have never touched Docker to organisations that expect Helm charts.
- Lighthouse is where I practise what I coach: strict TDD, fully automated CI/CD pipelines, and agentic software engineering with nWave sustain a continuous weekly release cadence.
- Lead strategy, client engagements, and consulting on flow metrics, forecasting, and agile/lean practices alongside Lighthouse development.
- Co-built LetPeopleWork's AI offering: obAIa, the AI-augmented Obeya we run the company on; hands-on AI workshops for technical and non-technical audiences; and LetPeopleWorkShop, an open-source Claude Code plugin for designing and running workshops. Presented how we work with AI publicly at Lighthouse Live (Sept. 2026).

ABB Power Grids / Hitachi Energy

Hitachi Energy (formerly ABB Power Grids) is a global technology leader committed to advancing a sustainable energy future. The company develops innovative solutions for power grids and energy systems, specializing in high-voltage technologies, digital grid automation, and energy storage. Its mission is to drive the transition to renewable energy and ensure reliable power delivery worldwide.

I began my journey at ABB during my apprenticeship, continuing to work on an hourly basis while pursuing my Software Engineering studies. After completing my degree, I joined the company full-time as a Software Engineer and have since taken on diverse roles and responsibilities, contributing to various initiatives over the years.

Hitachi Energy

Baden, Switzerland

Head of Processes and Quality for Platforms, Agile Coach (Senior Software Engineer II) — *Oct. 2023 - Mar. 2025*

- Drove process improvements across 10+ teams, including offshore externals integrated into the setup. Partnered with Scrum Masters and Product Owners to define clear team boundaries that empowered self-management while preserving a unified working style and shared quality standards: clear quality goals, a standardised workflow, Definition-of-Done criteria, and key performance metrics.
- Owned quality for three internal platforms. Established objective, data-driven quality metrics with developers and Product Owners, replacing subjective assessment. Designed dashboards and automated data collection for team and stakeholder transparency, and supported teams in turning that data into validated improvement experiments.
- Delivered interactive Scrum training to groups of up to 50 people across departments, focused on behaviour change rather than ceremonies (Liberating Structures, Training from the Back of the Room).
- Built my own tools to automate project-management and metrics work, including portfolio-level forecasting for features spanning several teams. The probabilistic forecasts replaced effortful estimation, proved more accurate, and later inspired Lighthouse.

Hitachi Energy

Baden, Switzerland

Tech Lead, Scrum Master, Configuration Manager (Senior Software Engineer) — *Dec. 2019 - Oct. 2023*

- Owned Configuration Management and pipelines for a Product Line spanning multiple products and teams. Led the modernisation of CI environments, automating previously manual processes (digital signing, open-source licence scanning, cybersecurity vulnerability remediation). Founded a 'Configuration Management Forum' to share practices across teams and products.
- As Scrum Master, led a team building a C#/React/TypeScript application on Azure Cloud, and built the full CI/CD automation myself, shifting from a tedious quarterly manual release process (with stressful urgent-hotfix cycles) to multiple releasable builds per day and on-demand production deploys (roughly monthly in practice). Ran weekly 'Scrum Bites' with the Product Owner and developers to evolve one practice at a time.
- As Scrum Master, led a single team through the 8-month modernisation of a 350k LOC Silverlight application onto .NET 6+, TypeScript, and React. Introduced TDD and clean-code practices so the rebuild stayed incremental and low-risk for existing users.
- Coached and trained multiple teams in Scrum and Kanban, introduced flow metrics and probabilistic forecasting, and founded a company-wide 'Scrum Master Guild' that spread good practices through internal events and meetups.

ABB Power Grids *Baden, Switzerland*

Software Developer, Scrum Master (Software Engineer) *Aug. 2014 - Dec. 2019*

- Developed modular Windows desktop applications in C#/.NET with WPF/XAML.
- Member of the 'Clean Code Team' driving adoption of static analysis, pair programming, code reviews, refactoring, unit testing, and TDD. Ran introductory training and hands-on workshops to help teammates embed these practices day-to-day.
- Built and extended a continuous integration environment on Azure Pipelines, automating builds, test runs, and package deployment to test environments for faster feedback and more reliable releases.
- Built an automated end-to-end test framework based on the page-object pattern, running against the latest pipeline packages to validate changes continuously.
- Led the scale-up from 1 to 5+ teams across 5 countries. Delivered several weeks of on-site training and hands-on onboarding, and established a Nexus/SAFe-based scaled process model.
- Mentored an application developer apprentice through their training, guiding their day-to-day growth in software engineering.

Education

University of Applied Sciences and Arts Northwestern Switzerland *Windisch, Switzerland*

Certificate of Advanced Studies in Data Science *Apr. 2019 - Jun. 2019*

University of Applied Sciences Zurich (UAS Zurich) *Winterthur, Switzerland*

Bachelor of Science in Software Engineering *Sep. 2011 - Jul. 2014*

Lernzentren LfW/ABB *Baden, Switzerland*

Federal VET Diploma in Information Technology (Informatiker EFZ) *Aug. 2006 - Jul. 2010*

Certifications

Scrum *Scrum.org Profile*

Certifications with Scrum.org

- All Scrum Master certifications, including PSM-III
- Other certifications: PSPO-I, PSD-I, PAL-I, and PSK-I

Kanban *Credly Profile*

Certifications with ProKanban.org

- Professional Kanban Trainer (PKT)
- Certificates: PSK-I, PAM (Metrics), and SPK (Scaling)

Community Contributions

Conferences and Meetups

- Regular participant at conferences and meetups
- Speaker and workshop host, e.g. at DevOpsDays Zurich and the DevOps Meetups Zurich and Bern
- Co-organiser of meetups

Blog Posts

- Published various posts on Medium and Substack
- Contributed to publications like Serious Scrum and Mastering Agility
- Case Studies republished on ProKanban.org

OSS Development

- Lighthouse – tool for Flow Metrics and data-driven portfolio-level forecasting
- Azure DevOps Extension for CI/CD Pipelines
